

Women and hair thinning

Come Closer, Look At My Perfect Volume Hair!

"I thought it was a temporary condition, where women usually suffer some form of hair loss after the birth of a child. However, even after a year, I continued to notice that my hair was slowly thinning, causing bald patches to appear. I was constantly laughed at by colleagues and family." Shared Goh Ah Muey

Female pattern baldness is the most common type of hair loss amongst women, with hair loss occurring around the whole top of the head. Female pattern baldness occurs in miniaturizing hairs over all affected areas of scalp, hairs become thinning predominantly over the top and front of the head.

Symptoms of Post Natal Hair Loss Includes:

- Significant Loss of Hair
- Oily Scalp
- Balding
- Itchy
- Excessive Shedding if Dead Skin Cells from Scalp

"It was good of 101 HAIR CARE to diagnose me with the correct condition utilizing the Computerized Scalp Analysis before starting on my recovery journey, beginning with the Signature Therapy Solutions. Now my hair loss problems are solved. Thank you 101, 101 works!" mentioned Goh Ah Muey

101 HAIR CARE's Signature Therapy Solutions, includes:

Deep Cleansing - Cleansing of the pores prevent blockage and clogged oil in the follicles, balancing the sebaceous glands. This process also encourages hair growth.

Prevention - Through the application of herbs, follicles containing hair roots are nurtured, preventing premature roots from dying and falling off.

Strengthening - This step will strengthen existing hair as well as baby hair, so that new hair that grows will be nurtured and sustained.

Growth Stimulation - This is to stimulate hair growth. When the new hair begins to grow, the hair will be further stimulated to accelerate the growth process.

Female Pattern Baldness

Intan Sari, age 27

Goh Ah Muey, age 43

Female pattern baldness is the most common type of hair thinning among women, with hair thinning occurring around the whole top of the head.

skin cells from scalp and itchy-ness.

"I thought it was a temporary condition, where women usually suffer some form of hair thinning after the birth of a child.

However, even after a year, I continued to notice that bald patches were starting to appear. It was a very frightening experience. It was also very demotivating to lose hair at such a young age. I was constantly laughed at by colleagues and family," shared Goh.

It is therefore vital for all women to find out the root cause of hair thinning before seeking treatment, by getting the correct diagnosis.

101 Hair Care, a world renowned

brand with more than 10 international awards, leveraging on 100% natural herbs ingredients, and with over 16 million customers nationwide is the specialist hair care that you can trust.

"It was good of 101 Hair Care to diagnose me with the correct condition utilising the Computerised Scalp Analysis before starting on my recovery journey, beginning with the Advance Follicle Technology (AFT)," mentioned Goh.

The computerised Scalp Analysis, which is the first of its kind in Malaysia, is carried out by experienced 101 Hair Care consultants. The process includes:

- Identifying the causes of

hair loss

- Analysing follicle condition
- Calculating hair density
- Measuring hair thickness
- Analysing hair cuticles
- Computerised report generation

101 Hair Care's signature Advance Follicle Technology (AFT) is a successfully proven therapy to treat hair thinning, with four major focuses, which includes:

Deep Cleansing - Cleansing of the pores prevent blockage and clogged oil in the follicles, balancing the sebaceous glands. This process also encourages hair growth.

Prevention - Through the application of herbs, follicles

containing hair roots are nurtured, preventing premature roots from dying and falling off.

Strengthening - This step will strengthen existing hair as well as baby hair, so that new hair that grows will be nurtured and sustained.

Growth Stimulation - This is to stimulate hair growth. When the new hair begins to grow, the hair will be further stimulated to accelerate the growth process.

IMAGINE waking up to find a clump of hair missing. Or slowly and gradually, you notice that more hair gathers at the bottom of the bathtub each time you take a shower. These fears of premature hair loss are unfounded.

According to statistics, the total hair loss suffered by female patients in 2005 was 35%; in 2009, 42% of women were affected by hair thinning problems.

Female pattern baldness is the most common type of hair thinning among women, with hair thinning occurring around the whole top of the head. Female pattern baldness occurs over all affected areas of the scalp with hair thinning predominantly over the top and front of the head.

Hair loss in women can also be caused by medical conditions, such as polycystic ovary syndrome which is a common hormonal problem in women. Thyroid disorders, anemia and even chronic illnesses or the use of certain medications can also cause hair thinning in women.

Others can develop a temporary hair shedding problem known as telogen effluvium - a change in the natural hair growth following childbirth, crash dieting, surgery or a traumatic emotional event.

One such example is 43-year-old Goh Ah Muay, who suffered from postnatal hair thinning. Postnatal hair loss affects approximately 40% of all women with children. Symptoms include significant loss of hair, oily scalp and excessive shedding of dead
